

New NOAQ Boxwall BW102

The NOAQ Boxwall BW52 is a temporary free-standing flood barrier, that is currently available in some 30+ countries. It is light, easy-to-use and logistic friendly. And further, the Boxwall is self-anchoring. This means it does not need any anchoring, as it is stabilized entirely by the own weight of the flood water. The BW52 model is able to hold back 50 cm of water.

Now we are about to step up to the double height. Our new model, the NOAQ Boxwall BW102, will be able to reliably hold back 1 meter of water. Still we have been able to reuse most of the design features of the BW52, which means the BW102 will be almost as easy-to-use as the BW52. The individual "boxes" will weigh not more than approx. 15 kg.

Preliminary the new BW102 will be launched in March 2020.
